Gigabit

Cat.6A
system

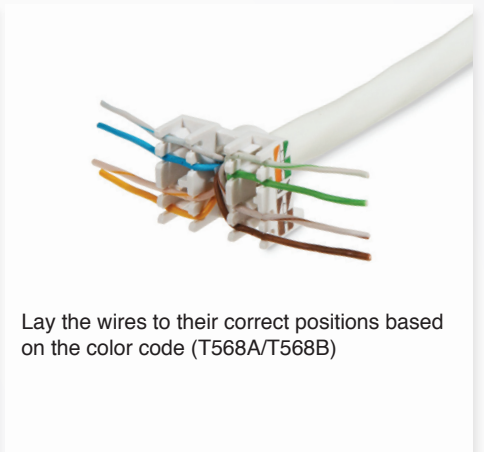

500
MHz

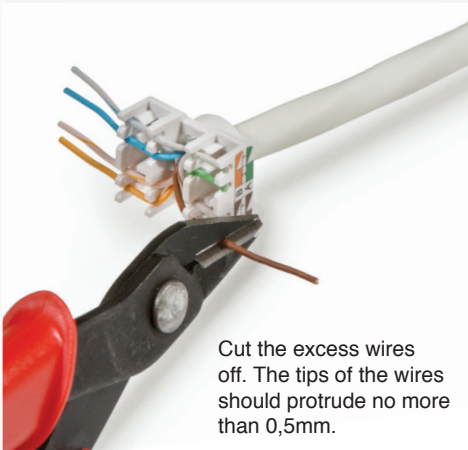

Strip the cable for minimum 75mm, pull the foil or braided shield back over the jacket and wrap the drain wire around the shield.
NOTES: IDC is suitable for 22-26 AWG wires.

Insert the wires into the cap through the holes.

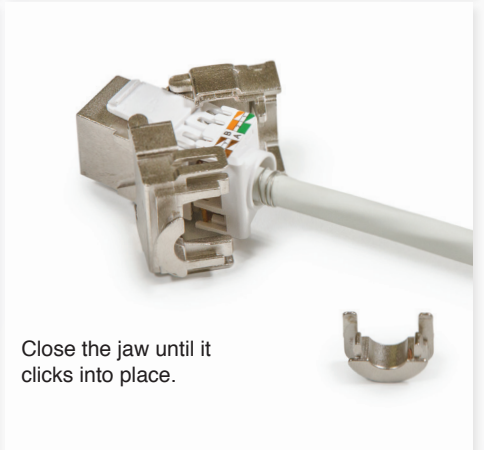

Lay the wires to their correct positions based on the color code (T568A/T568B)

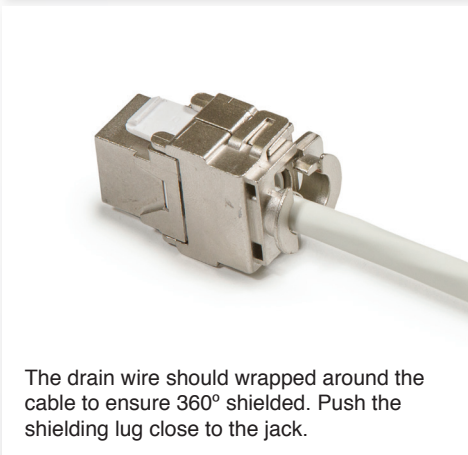

Cut the excess wires off. The tips of the wires should protrude no more than 0,5mm.

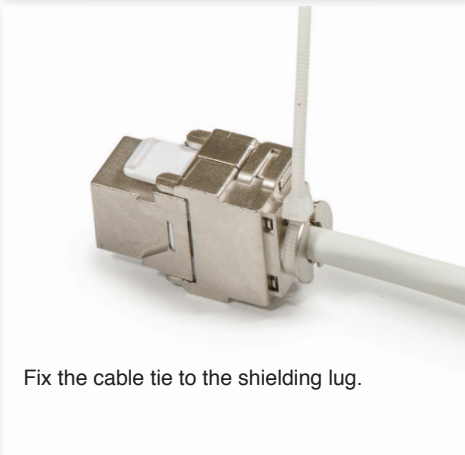

Put the cap on the IDC tower. The arrows on the jack and the cap should face the same direction. Put the cap into the position.

Close the jaw until it clicks into place.

The drain wire should be wrapped around the cable to ensure 360° shielding. Push the shielding lug close to the jack.

Fix the cable tie to the shielding lug.
